

# Spatial Data Research Parcel Mapping Services

Creation, Conversion and Integration of Parcel Mapping Layers

Planning, research, and analysis are the keys to determining and defining GIS user needs. SDR's parcel integration services also include:

- Organization Evaluations
- Existing System Critiques
- Strategic Plans
- Feasibility Studies
- Cost/Benefit Analyses
- System Specifications
- Database Design
- Management Control
- Process Conversion Strategies
- Systems Integration
- Maintenance Solutions
- Follow Up and Review

## GROW YOUR GIS WITH PARCEL MAPPING BY SDR

SDR will help grow your GIS by converting parcel data into GIS format and linking these GIS maps to vital assessment databases. GIS parcel data, along with other GIS layers that affect appraisal and taxation such as building footprints, soil types and land use, forms the basis for an integrated system that returns critical geographic and valuation data for assessment and appraisal in real-time, as parcels are split and ownership changes.

SDR understands that the numerous options and approaches for implementing these complex systems has resulted in many users not realizing the full potential of their systems or spending unnecessary time and money on their development. SDR designs plans and systems that will fit your needs over the life of your project.

SDR will work with your staff to locate and evaluate existing resources such as aerial imagery, AutoCAD files, Mylar or paper parcel maps and digital or other appraisal/assessment databases. GIS parcels can be created from AutoCAD data, by scanning paper or Mylar maps, from or with the support of geo-referenced aerial imagery, by entering legal descriptions to get shape output or by a systematic combination of these techniques.

Parcel IDs are entered for each digitized parcel to link the parcel to a specific database record. SDR also offers field photography services to link digital images or video footage to each parcel along with a GPS coordinate.

Parcel conversion services are available starting at \$2.00/parcel.
